SUSTAINABILITY GOALS

Enoc System – Made in Sweden since 1935

Enoc System is one of Scandinavia's leading manufacturers of enclosures and accessories for network and data installations.

With headquarters in Anderstorp and operations across several Northern European countries, we stand for products of the highest quality that combine flexibility with smart design.

We specialize in server cabinets that protect and store sensitive equipment in your network or data center. From single racks to complete system solutions.

Our core values include building strong relationships with local partners, which we see as the key to success, and ensuring the well-being of our employees in the workplace. In line with this, we have implemented environmentally friendly measures such as the installation of a geothermal heat pump in 2011 to replace oil usage and created a better working environment through more spacious premises following our latest expansion during 2021/2022.

As a socially responsible company, Enoc System also regularly donates money to charitable organizations and believes it is important to support local community organizations.

- Family company founded in 1935
- 35 employees
- Sales 100 million SEK
- Manufacturer with a wide range of products
- Annual production 25.000 enclosures

High accessibility

- **Headquarters, manufacturing and warehouse**
Anderstorp, Sweden
 - **Sales office and warehouse**
Germany
 - **Representatives**
France, Belgium, Norway, Denmark,
Finland and Baltic states
- 

A year of strong development and strategic milestones

Dear Customers and Partners!

As we approach the end of 2024, we can proudly look back on a fantastic year filled with progress and innovations.

One of our most significant advancements has been in our sustainability efforts. We have hired a Sustainability Manager, further strengthening our commitment to the environment and ensuring that we continue to make substantial progress in this area.

We have also relocated the production of our aluminum profiles to Småland, Sweden. This change has already resulted in a significant reduction in our environmental impact. The raw materials used in production are entirely produced with fossil-free energy from Iceland and Norway.

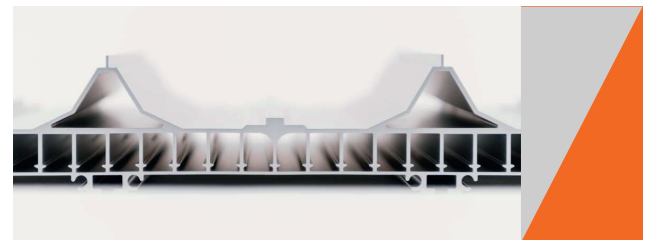

With our newly invested packaging machine, we will reduce the use of shrink wrap by approximately 60-70% when packaging our accessories, without compromising on protection.

We look forward to 2025 with great enthusiasm and promise to continue doing our best for you as a customer, while also working for our shared environment.

Best regards,
Ulf Enocson, CEO

Future Goals

- **Climate Calculation for All Cabinets:** Implement a method to calculate the climate impact of all cabinets by integrating weight data into the business system.
- **Sustainability Goals:** Develop and establish sustainability goals to guide ongoing efforts towards a more sustainable future.
- **Reduction of Climate Footprint:** Actively work to reduce the climate footprint in accordance with Sweden's environmental goals, aiming for net-zero greenhouse gas emissions by 2045.
- **Climate Calculation 2024:** We look forward to the climate calculation for 2024 and hope for significant progress and positive results.

Certificate

This Certificate covers the following Aluminum billets:

LOCAL – ProfilGruppen Sustainable Aluminium.
ProfilGruppen Extrusion is committed to a more sustainable future.

The LOCAL Sustainable Aluminium billets used in the profiles from ProfilGruppen are produced under conditions that ensure a maximum carbon footprint of 4,0 tons CO₂-eq/ton Aluminium (GHG level 1,2,3).

The active choice of LOCAL Sustainable Aluminium billets generates a saving of 2,70 tons CO₂ / ton Aluminium compared to average European production.

Certificate No: 131-rev 2
Certification holder: Enoc Systems AB
Project: BTB1491
Tonnage: 50 Metric Tons
Delivery date: q4-2024

50 tons LOCAL Sustainable Aluminium billets – CO₂ saving 135 compared to average European production.

**Profil
Gruppen.**

ProfilGruppen is continuously working with all of our producers to enhance the quality of delivered material. One of our main promises is the ambition to follow the complete chain of sustainability factors to be able to offer LOCAL our certified product.

Certifications

We are certified according to ISO 9001 and ISO 14001, and our quality policy spans from company level to each employee's daily work routines.

Global Goals

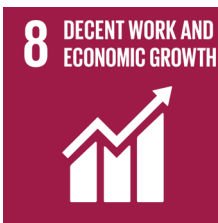

World leaders have committed to 17 global goals to achieve four great things by the year 2030. To end extreme poverty. To reduce inequalities in the world. Solving the climate crisis. To promote peace and justice.

Enoc System supports Agenda 2030 and has identified four goals where we already make a difference today and which we want to focus on going forward.

Health and Well-being

Enoc wants to contribute to well-being and promote mental health, and we believe that exercise, movement, and community are important for this. Therefore, we donate to a range of organizations that promote recreational activities and community life among youth and adults.

Decent Working Conditions and Economic Growth

Enoc complies with the laws and agreements regarding employment and protecting workers' rights, contributing to a safe and secure work environment for everyone. We work on continuous improvements in the work environment and consider this work important to retain the skills and personnel we currently have, as well as to attract new talent and develop the company. Our suppliers are evaluated based on how they adhere to the UN's 10 principles on business and human rights.

Sustainable Industry, Innovation, and Infrastructure

Enoc works with sustainability by mapping its climate impact through calculations that will result in sustainability goals. Since material consumption and, by extension, our suppliers play a significant role in Enoc's climate efforts, we believe that close collaboration with suppliers is an important part of increasing sustainability within the industry together.

Sustainable Consumption and Production

Enoc works together with suppliers and recycling companies to find the best solutions for waste, where recycling is desirable. We want to contribute to more sustainable production of the materials we use, and therefore choose materials carefully and try to influence our suppliers towards more sustainable purchases. With close collaboration with the largest suppliers, we seek assistance during the construction phase to minimize material usage as much as possible.
